

THE HUBI.

The 5 minute wonder for the DHP pallet exchange!

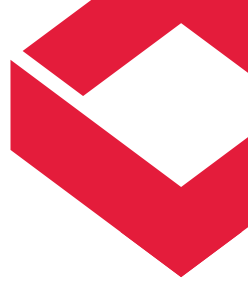

Make it easy for yourself.

With HUBI - our unique lifting device for loaded goods. Your employees in warehouse logistics and palletising will not only value it - they will love it! Why? It saves time, strength and nerves. And at the end of each day above all else a lot of money. The working time for the reprocessing of goods that are no longer suitable for being loaded on Düsseldorf half-pallets (DHP) is significantly reduced - from previously approx. 15 minutes to 5 minutes! The HUBI is also available for Europa pallets and other formats.

Intelligent technology, stable, easy-to-use and an economic miracle - that's what HUBI is:

... and this is how it works:

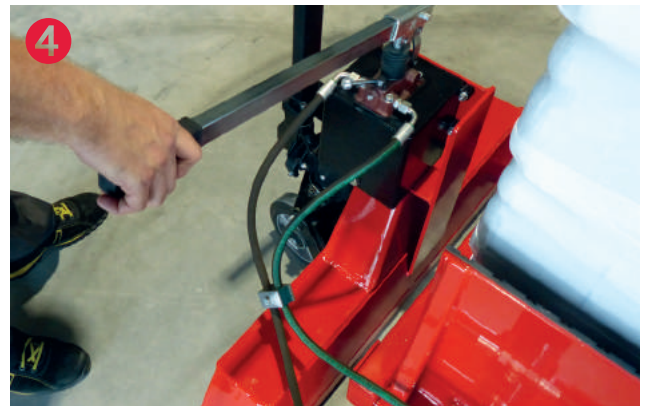

The defective DHP is no longer tradeable due to the damage.

The goods are picked up via the hydraulic clamping and lifted from the pallet via HUBI.

The defective pallet is unloaded with a free lift and then replaced by a tradeable DHP.

Then the goods are put on a good DHP and the clamping is loosened.

Another PLUS: You achieve significant savings in costs because the product does not have to be completely re-wrapped and the labels are preserved. The HUBI is removed and the pallet is ready.

After 2 to 4 windings at the pallet foot the pallet is again save for loading and ready for transport. Done! Thanks to HUBI the pallet exchange only takes 5 minutes.
